OSHA 10-HR Construction Industry Safety Course

Do you or your employees have the tools you need to work safely? The OSHA 10-hr course is designed to assist employees with recognition and avoidance of safety and health hazards on the jobsite. This is an entry level look at the OSHA standards as they apply to construction jobsites. Who should attend? Company owners, field employees and anyone who has a safety responsibility on the jobsite would benefit from this class. Learn from actual claims that have occurred – one misstep or unsafe behavior can affect you and your company. We will employ hands on discussions of real life situations that you may have experienced and the solutions to correct them. All participants must be able to pass the final test to earn a course completion card. By attending this class, you'll be able to:

- Recognize and avoid jobsite hazards and protect others from harm
- Learn about what rights and responsibilities you have as an employee in regards to safety on the jobsite
- Anticipate what to expect from an OSHA inspection, including rights the employer has
- Comply with OSHA standards for fall protection, electrical, PPE, and more
- Save money by avoiding fines and costly insurance claims
- Feel safer working on the jobsite
- Earn a course completion card from Federal OSHA

Seating is limited – register today!
